Q's	Question	18		COs LL					
1	1	TTML5 code to create a video player with controls that allows the user to volume and play-pause the video. CO1, CO2, CO3							
2	between replace the buttons w	HTML5 code to embed an audio file with a mute button that toggles auting and unmuting the audio. In addition, hide the default controls and the custom play and pause buttons using button the CSS (e.g., change colors, add hover effects). Ensure the buttons are correctly and visible properly, and music does not autoplay on page load.							
3	brief desc					CO1, CO2, CO3	L2 L6		
4	play-paus	play-pause button, volume control, and a progress bar. When the page is loaded, it CO					CO1, CO2, CO3	L2 L6	
5	attribute	rate an HTML video player to add a video file(sample.mp4). Include controls ribute and set the video to mute automatically using the muted attribute. Set the lth of the video to 800px while maintaining the aspect ratio. Additionally include a CO3 L2, L3 L6							

	short description of the video using a tag and add a poster image as a thumbnail that appears before the video starts.		
6	Write an HTML5 code to embed a video and set it to preload the video data before it starts playing using the preload attribute.	CO1, CO2, CO3	L2, L3, L6
7	Create an HTML5 video player(nature.mp4) that starts automatically when the page loads. Ensure the video loops continuously when it reaches the end. Mute the video by default and add a message for browsers that do not support the <video> element . Adjust the video size using CSS instead of the width attribute.</video>	CO1, CO2, CO3	L2, L3, L6
8	Write an HTML5 to embed a video file (movie.mp4) and hide the default controls. Create a play and pause buttons using <button>. Style the buttons with CSS(e.g., add hover effects and icons). Position the buttons below the video using grid or flexbox. Then, add a progress bar (<input type="range"/>) that updates based on the video's playback time</button>	CO1, CO2, CO3	L2, L3, L6
9	 Create a webpage using HTML and CSS that gives an introduction to "Responsive Page Design" and adjusts its layout based on the screen size: When the webpage is viewed on a desktop screen (width ≥ 768px), it should display content in two columns. When viewed on a smartphone screen (width < 768px), the content should be displayed in a single column. Use CSS media queries to achieve this responsiveness. The page should have a header (Responsive Page Design), two content sections and footer (Contact information and social media links). Note: The first section can have a paragraph on what is RWD, why it is used and its benefits. The second section can have an image and a link which can provide more information about RWD 	CO1, CO2, CO3	L1, L2, L3, L6
10	Design a Responsive Webpage using HTML & CSS where the given table is displayed differently on desktop and smartphone screens. The webpage should contain the following features: • The table should be fully visible on desktop screens (with a fixed width and proper styling). • On smartphone screens, the table should be: • Displayed in a stacked format (each row displayed as a block for better readability). • Styled differently (e.g., background color, font size adjustments). • Use CSS Media Queries to handle the responsive design.	CO1, CO2, CO3	L1, L2, L3, L6

Employee ID	Name	Age	Department	Salary	Location
EMP001	Alice	25	IT	\$70,000	New York
EMP002	Bob	30	HR	\$60,000	Los Angeles
EMP003	Charlie	22	Marketing	\$50,000	Chicago
EMP004	David	28	Sales	\$65,000	Houston
EMP005	Eve	35	Finance	\$80,000	Miami
